The SoftDent Difference

Over the last twelve years, our local consultants, installers, and trainers have helped over 10,000 dentists nationwide manage their dental practices more effectively. The SoftDent dental management system is supported by over 250 dedicated individuals, at both the local and national levels. On the following pages, we will outline some of the reasons why SoftDent is the number one choice of those dental practices that are looking for serious practice management solutions. We will demonstrate how highly creative innovation and total integration have helped SoftDent redefine dental automation over the last three years. The realization of over twelve years of constant development is embodied in our new 32-bit, "Designed for Windows 95" practice management system, SoftDent for Windows 95 and Windows NT.

The People Behind the System

Many practices select SoftDent for its advanced feature set and comprehensive reporting capabilities, but most have also given special consideration to the exceptional local service organizations across the country that support our SoftDent customers. When you purchase SoftDent for Windows, SoftDent for DOS, SoftDent Express, or SoftChart, our clinical management system, you become a member of a very exclusive club. It gives you access to a nationwide network of certified trainers, practice management consultants, installation experts, and support technicians that are unparalleled in the industry. More than 250 local professionals provide hardware and software support for our customers. All SoftDent trainers and technicians are constantly reviewed and certified to ensure competency and consistency throughout the country.

We're Problem Focused and Results Oriented

SoftDent is not just another software program it is a management philosophy. By combining advanced software features with comprehensive training, exceptional local service, superior technical support, and ongoing enhancements, SoftDent has made a significant difference in more than 10,000 dental practices nationwide. We concentrate on increasing productivity, fully utilizing all your available resources, optimizing your cash flow, and decreasing your overhead. We can show you how to work smarter to maximize the profitability of your dental practice, which will provide you with the time, opportunity, and income to enjoy the benefits of your labor.

SoftDent Offers You Complete Freedom of Choice

When InfoSoft, the developers of SoftDent, decided to write the Windows version of their popular dental management program, they created a whole new database integration design. Rather than abandoning their popular MSDOS-based software system, and the 9,000+ customers that were using the system, they decided to find a way to enable each computer operator to choose the interface that best fits their individual needs. With the ingenious new SmartData concept, you can run SoftDent for Windows or SoftChart on your new Pentium computers and SoftDent for DOS on your older PCS. Both user interfaces can access the same database and share data over the network. You don't have to perform costly upgrades or dispose of your existing computers to take advantage of the new 32-bit operating systems. SmartData is just another example of how creative innovation and total integration have become the hallmarks of the SoftDent system. SoftDent for DOS is included in the purchase price of SoftDent for Windows 95, so every customer has complete freedom of choice.

SOFTDENT Optimizes Your Daily Office Routine

The Innovative Inoffice Display

Most systems require you to look up the individual records of each patient that is due in for an appointment that day. With SoftDent, you don't have to search for today's patients; your entire day's schedule is automatically loaded into our exclusive InOffice display at the beginning of each day. The InOffice screen is your bridge between all of the patient processing tasks in the system. Our Automatic Checkout Button allows you to check out a patient in less than 30 seconds. When there are workstations installed in the operatories, the InOffice screen can also be used as a patient status monitor showing the current location and elapsed time for each patient.

Efficient Transaction and Patient Processing

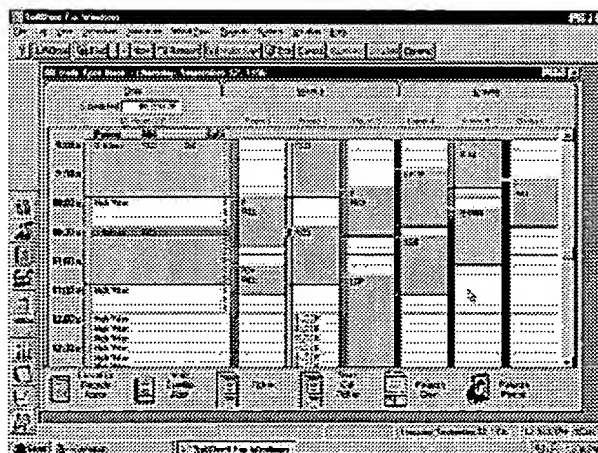

SoftDent's real-time accounting system doesn't require any end-of-day posting activities. The elimination of this cumbersome process means you can add and edit transactions at any time, based on your security level. This advanced function also allows you to do off-cycle billing. When a final insurance payment is received, the system automatically prompts the operator to generate a statement whenever there is a patient balance that still needs to be collected. Your cash flow is no longer tied to a monthly event! SoftDent's advanced bulk payment entry screens allow you to post a single insurance payment to multiple accounts or a personal check to individual patients in the same account.

Accurate and Immediate Insurance Estimation

Accurate estimation of a patient's co-payment for each transaction entry results in a dramatic and immediate improvement in your cash flow. SoftDent's insurance estimation feature takes into consideration PPO write-offs, DMO co-pays, patient and family deductibles, allowed amounts (UCRs), risk write-offs, fixed fee reimbursements, and maximum benefits. SoftDent's insurance estimation is the most accurate in the industry and doesn't rely on any third party programs to calculate benefits.

A Proven Appointment Scheduler

SoftDent's appointment scheduling capabilities are extraordinary.

[Press here to view hi-res graphic](#)

With SoftDent for Windows, you have instant access to all of the most commonly used functions in the program through the dockable Power Bar. Just CLICK on the icon for an account, patient, or the InOffice screen. You can also go directly to the daily appointment book, print out the daily reports, access the memos and reminder system or look at your production goals. You don't have to go to a drop down menu or list box. You can also easily drag and drop selected patients, referring doctors, etc., to dial their phone numbers, send a letter, schedule an appointment, enter a payment, or checkout a patient. Why waste time performing routine tasks when SoftDent can do them automatically?

A System That Never Forgets

Say goodbye to all those Post-ItTM notes at the front desk. SoftDent's memo and reminder system allows you to direct messages to anyone in the office on all types of general subjects or in regard to a particular patient or account.

SOFTDENT Turns Your Treatment Plans Into Dollars

One of the most significant problems we find in a majority of the dental practices we serve is the fact that over 60% of their planned and recommended treatment is never realized. This is one of the most important areas of concern for any practice management consultant. If the system you choose will not help you significantly improve your realization numbers, it isn't worth having. SoftDent lets you build a treatment plan for each patient. It shows the insured patient the amount of participation they can expect from their insurance carrier. Treatment plans are broken down by appointment groups and automatically scheduled or entered into the tickler file. A pre-treatment estimate can be submitted electronically for confirmation of benefits. The treatment plan management reports track proposed procedures based on insurance approval, patient acceptance, and appointment status. Your acceptance and performance ratios are significantly improved with SoftDent's comprehensive tracking systems.

Efficient Data Entry Means No Wasted Effort

SoftDent uses a data entry scheme that virtually eliminates all redundant entries. Once you enter a planned procedure into the system, it is available to all other areas of the program. You can import planned treatment directly into the appointment book, without any additional data entry. If the procedures cannot be scheduled immediately, they can be placed in a tickler file for scheduling later. The Treatment Plan window on the Transaction screen lets you post planned procedures directly to the ledger card whenever they are completed; or they can be automatically posted from the appointment card. If the insurance company changes the allowed amount for a certain procedure, or if you change one or more of your fees, the treatment plan and insurance files are automatically recalculated on a global or individual basis, saving you both time and money.

Flexible Patient Payments Plans

With SoftDent, you can offer your patients a variety of payment options that will encourage them to proceed immediately with your recommended treatment. Contract Billing with Payment Coupons and Truth in Lending Statements are easily and automatically set up for any patient. SoftDent also allows you to set up minimum monthly payments, revolving charge accounts, and no-interest "Ortho" budget plans. All these payment options provide you with maximum flexibility and increased opportunities.

Constant and Deliberate Reminders

Some patients tend to conveniently forget their scheduled visits and your recommended treatment, until it becomes an acute situation. With SoftDent, appointment, treatment plan and recare information is monitored on a continual basis. The system tracks incomplete treatment plans, broken and missed appointments, and overdue accounts. You can produce call lists for your next day appointments and current recall patients and send them to the Contact Processor. Postcards are available for recall, non-recall, planned treatment and/or missed, broken and canceled appointments. Labels can also be printed to attach to any preprinted, commercially available reminder cards. This type of due diligence will produce significant improvements in the practice's overall production and profitability.

SOFTDENT Increases Your Office Efficiency

Multi-Tasking and Multiple User Access

SoftDent's multi-user version manages all your additional workstations with ease. RECORD locking allows multiple operators to work on the same files simultaneously. SoftDent also lets you perform multiple tasks on a single workstation. Through the use of the keyboard function keys, you can access any other file in the system from any screen in the program while maintaining your current workspace as a background task.

Unique Ability to Auto-Post Appointed Procedures

Most programs with appointment schedulers require a significant amount of redundant entry because the scheduler is actually a stand-alone software module. With SoftDent, you put the procedural information in once, on the appointment card, and you can post that information directly to the patient's transaction screen without any additional data entry.

State-of-the-Art Laser Forms and Labels

There are no costly, preprinted forms to buy with SoftDent. All output is designed to print on plain white paper using any HP-compatible laser printer.

Unsurpassed Word Processing Capabilities Information extracted from your records can be merged with documents created in most of the popular word processors. A selection of more than sixty pre-written practice management letters are provided with the system. In addition, there is a collection of pertinent Quick Letters available from the Patient Information Screen.

Efficient Prescription Writing and Tracking System An unlimited number of prescriptions are available at the push of a button. A full audit trail is attached to each patient record showing the date of the prescription, quantity, dosage, and refill information.

Automated Contact Processing For most of our clients, generating one of SoftDent's comprehensive practice management reports is only the first step in the patient management process. After running an Account Aging Report, for example, a staff person usually needs to call each account with an overdue balance and/or send them the appropriate letter. The Contact Processor organizes report-generated information into a list for easy reference. You can also record the details of each patient contact. You can even merge Contact Processor lists with postcards and letters. No patient is overlooked, no staff time is wasted, and your office has a complete contact history for every patient, referring doctor, insurance company, dental lab, employer or pharmacy.

Unparalleled Insurance Processing Capabilities With Electronic Claims Submission (ECS) and batch processing, insurance submission is a completely automated process. SoftDent offers an all-payer electronic claims submission solution. Both paper and electronic claims can be submitted to the insurance carrier for 45¢* a claim. This is far lower than you can process them by hand and one of the lowest all-payer transaction fees in the industry! Electronic claims are transmitted to the carrier overnight and paper claims are printed and mailed the next business day. All claims are tracked by the system until they are paid in full by the insurance carrier. The Insurance Payment Entry Screen allows you to post bulk payments to individual claims, write off any PPO deductions, update the UCRs, and send out an account statement in a matter of seconds.

Expedient and Comprehensive Statement Processing Accurate insurance estimation enables you to bill your insured accounts based on their current, insurance-adjusted gross balance. In most cases, co-payments are received at the time of service or after the first billing cycle. SoftDent's advanced billing options let you send statements at any time during the month based on the current receivable status of each one of your individual accounts.

SOFTDENT Will Help You Manage Your Practice

Fast and Efficient Daily Reports

How long does it currently take you to close out at the end of the day? With SoftDent, your Daysheets, Deposit Slips and Reconciliation Reports are compiled in a matter of seconds. Using the built-in report scheduler, the next day's operatory schedules, end-of-day callback lists, missed appointment reports, etc. can also be printed automatically. With SoftDent, the entire process at the end of the day will take you less than two minutes.

Explicit Practice Status & Production Reports

SoftDent's, daily, weekly and year-to-date figures are available at the push of a button. Class of Treatment, individual ADA code and Transactions-for-a-Period reports help you break down all of your sources of income. Information can be sorted by provider, and/or date ranges. Send them to the screen, any printer on the network, a data file, or to the Contact Processor screen. SoftDent's unique Practice Summary Report gives you a complete overview of all your practice's vital statistics.

Reliable Accounts Receivables Reports

Most practices have to write off 5-10% of their gross production because they are unable to effectively track and collect aged receivables. SoftDent's ability to report on all outstanding and overdue receivables allows you to generate call lists for delinquent accounts, word processing merge files for marginal clients, and a list of those accounts that need to be turned over to a collection agency for further action.

Complete Referral Tracking Reports

Healthy practice growth is not possible without a good referral system. SoftDent enables you to analyze all of your sources of referral dollars and report back to the referring doctor on a patient's current status. You can also view a list of the patients that have been referred out of the practice to a specialist and the built-in reminder system notifies the operator when a referred patient is due back for their continued care.

Comprehensive Insurance Tracking Reports

With an advanced practice management system, like SoftDent, your unsubmitted and unpaid claims are constantly monitored for submission, compliance, and payment. SoftDent also tracks your pretreatment estimates, incomplete treatment plans, and broken or missed appointments. This can significantly increase your overall production dollars.

Some of the Unique Benefits of SOFTDENT

SoftDent is constantly establishing new standards for the dental software industry. Many of our software's innovative features are often copied, but rarely duplicated. Many of our competitors rush to put some of our advanced features into their programs, but they will never have the same level of seamless integration and advanced design that has made SoftDent the number one practice management system for the last ten years. Nothing compares to SoftDent and here are some of the new reasons why: Click [here](#) to view SoftDent for Windows with SoftChart.

Lab Case Tracking System

It is estimated that the average dental practice loses about \$30,000 a year due to ineffective scheduling techniques. One of the reasons for this loss of income is the complete lack of any system that will coordinate all of your materials, resources, and opportunities. SoftDent's lab case tracking system is completely integrated with the reminder/memo system and the appointment book. When you implement this feature, you'll never have a patient in the chair with the case at the lab.

Report Batch Scheduling

Everyone in the office can schedule their own report selections for daily, weekly, and/or monthly processing. Press a single button and all reports for the day run as a single group. If you forget to run your daily or weekly reports, SoftDent reminds you whenever you enter or leave the program.

Automatic Rollover of Insurance

If the insurance company hasn't paid after 90 days, the program can automatically reassign the insurance balance to the account and send a bill to the patient for the entire amount.

Real-Time Receivables Tracking and Comparisons

Most programs must run a lengthy report to find out your total year-to-date receivables. SoftDent keeps track of this information on a real-time basis. Every time you run a final Daysheet, the gross receivables are adjusted in the system. At the push of a button, the receivables window lists the daily production, collections, receivables, and adjusted gross balances for each provider in the practice.

User-Selected Reports

The SoftDent system includes a Custom Report Generator that gives you complete control over report content and search criteria. Templates can be saved and re-run on a regular basis using the Report Manager. You can also send any of these reports to SoftDent's built-in contact processor.

Electronic Routing Slips

For those practices that have computers in the treatment areas, SoftDent's Electronic Routing Slip facilitates the data entry process. The provider marks the procedure(s) as complete, puts in the proper interval for the next appointment, and the patient can be checked out in a matter of seconds at the front desk.

Flexibility and Functionality: The SOFTDENT Legacy

User-Defined and Alternating Recall Systems

Many dental practices now have soft tissue management programs or some other reason to recall patients for procedures other than a standard prophylaxis and exam. SoftDent allows you to set up two separate recall systems for each one of your patients. Our Instant Recall scheduling feature also handles alternating groups of procedures for every other visit (i.e. bitewings only once a year).

Orthodontic Insurance Billing Option

SoftDent handles both interceptive and comprehensive Orthodontic billing. Enter the procedures and SoftDent automatically bills the insurance company and the patient on a monthly or quarterly basis. A comprehensive report also lists the expected revenue from these deferred payment plans for the next twelve months.

Capitation and PPO Analysis

If you are involved in managed care plans, SoftDent constantly monitors the current status and ongoing financial viability of these alternative indemnity programs. Write-off reports for your PPO involvements, capitation income reports, and comparative analysis with your fee-for-service rates are all available in the practice management reports section of the program. You can also print out daily encounter reports for each plan.

Medical Cross-Coding

SoftDent is a full-featured dental management system and a complete medical billing program rolled into one. The system can be set up to automatically prompt the operator when a medical procedure code can be submitted in addition to, or instead of, the standard ADA code. In most states, General Dentists, as well as Periodontists and Oral Surgeons, can now submit a wide variety of dental procedures to the patient's medical insurance plan for reimbursement. All you need to know are the proper ICD9 and CPT codes and SoftDent can link this information to your standard ADA procedure codes. Aside from the obvious benefits this feature provides to the practice, it can also be used to conserve or augment the patient's regular dental benefits.

Hygiene Analysis Report

What is your recall effectiveness ratio? How many patients were reactivated last month? Is your patient retention ratio above or below normal? What percentage of your patients participate in your hygiene program? Do you have enough hygiene hours available to take care of all your patients? Find out why many practices are losing more than \$60,000 a year because their hygiene and soft-tissue management systems are not set up properly. It's all contained in this amazing SoftDent report.

Patient and Provider-Preferred Scheduling

You can locate the perfect appointment with one keystroke because SoftDent knows when the patient prefers to be seen; when the provider and room are available; when the assistant is needed; and what hours the office is open. Many programs claim to have an auto-scheduling feature, but how automatic is it?

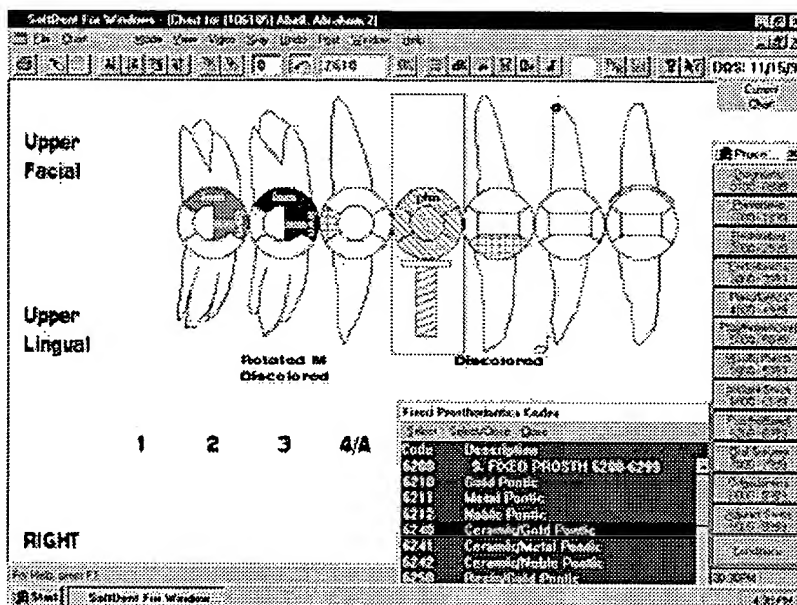

With SoftChart, you can chart both periodontal and procedural information.

Some of the features of SoftChart are:

- * Variety of Viewing Options
- * Fully Scalable Screens
- * Quick Entry Screen
- * Complete Treatment Differentiation
- * Easily Select Ranges of Adjacent Teeth
- * Quick Entry of procedures on Multiple, Non-Adjacent Teeth
- * Tooth Detail Window
- * Tooth Notes
- * Automatic Posting of Procedures
- * Condition Charting
- * Primary and Secondary Treatment Plans
- * Charting Outside Work
- * Undo Window
- * Built-in Video Capture and Storage either a digital or analog video signal from any intraoral camera
- * Complete Periodontal Examinations
- * Special Exams

There is a complete integration between the clinical and administrative functions of your practice. You can input data using a mouse, touch-screen, or light pen. Complete speaker-independent voice recognition will be available for the program in early 1997.

The Paper-less Office

The SoftChart system can provide you with a comprehensive patient record that contains periodontal information, existing conditions, initial chart, planned treatment, and completed work. These electronic records take up little or no space in your office and can be transported easily from one location to another.

Effective Risk Management

The better your patient documentation system, the better your protection is from a medicolegal perspective. By entering your clinical information into the computer on a chronological basis, you can go back to any point in time and look at the current charts for that period.

This advanced "Designed for Windows 95", 32-bit, clinical management system interfaces and shares data with both the DOS and Windows versions of SoftDent or the new entry level solution from InfoSoft, SoftDent Express. Using our exclusive SmartData Database, you can use any combination of preferred user interfaces to input the data.

Laser Generated Reports and Forms

All the patient demographic, accounts receivables and recall reports you'd expect from SoftDent and more: Patient Phone Directory with autodial capability * Practice Barometers Report * Referral Reports including average procedure per encounter for both patient and professional referrals * Hygiene Analysis Report * Practice Summary Report * Insurance Plan Schedule of Benefits Report * Capitation Income, Comparisons and Encounters * Budget Plan Coupons and Truth in Lending Statement * Prescriptions by Date * Budget Plan Report showing revenue for next 12 months * Outstanding Lab Case Report * User-Defined Production Report for any time period* Payment and Income Allocation Reports * Production Forecast by ADA Code, by Class of Treatment or by Provider * Accountants Earnings Report * Treatment Plans with Maximum Benefits and Insurance Estimates * Reconciliation Report * Receivables Summary, Comparisons, Breakdowns, and Ratios * Insurance Plan Income Report * Outstanding Referral Report * Orthodontic Insurance Projected Income Report * No Response to Contact List * ...and many other TRULY USEFUL REPORTS. Call us at 1-800-433-2409 or order more info online and we'll send you our 64-Page SoftDent Reports and Information Booklet Free of Charge.

The SOFTDENT Philosophy

We are solution providers, not just software vendors. We believe in joint venture relationships, not unilateral experiences. You should think of the appropriate management system for your office as an investment in the future of your dental practice. Do this simple calculation: take your Adjusted Gross Revenue and multiply it by .075. That's a very conservative estimate of how much SoftDent can increase your revenues in the first year by improving recalls, increasing productivity, reducing receivables, augmenting collections and production, and optimizing your cash flow. This figure does not even take into consideration the additional benefits of full treatment planning, and the enhancements to your internal marketing capabilities, or recovered insurance dollars made possible by SoftDent's advanced tracking capabilities. SoftDent can also help reduce your accounting fees and overall labor costs by providing you with more efficient ways to manage your practice. We offer you lasting benefits, real solutions, and affordable prices. SoftDent is ALWAYS the first choice of practices the second time around. If you make it your initial selection, you'll save the time, money and aggravation of having to go that extra round.

If you already have a practice management system, there's always room for improvement! The conversion process is easier than you might think. Dental computer systems first arrived on the scene almost fifteen years ago. Since then, many software companies have come and gone. Many dental programs that are still around haven't been significantly updated in a very long time. Since you requested this information, we are going to assume that you are not 100% satisfied with your present system. Well, you're not alone! Over the last ten years, we have converted over 3,000 dental practices to SoftDent. We aren't the conversion specialists because we want to be; we provide this service because we feel an obligation to the dental community. We can usually electronically convert the data in your present system to the SoftDent format. If your current software program isn't living up to your expectations, we'd like to be given the opportunity to show you how SoftDent can meet or exceed all of your expectations of a practice management system. We'd like to show you how a mutually beneficial relationship with the SoftDent organization can help your practice prosper through a Partnership for Profit! Thank you for considering SoftDent as your administrative partner. Be sure to ask for our 12-page color brochure and FREE demo disks.

*Per claim charge subject to change without notice. Voice recognition to be added in 1997.

Advanced Search

find this URL	<input type="text" value="http://"/>		
between these dates (optional)	Month <input type="text"/>	Day <input type="text"/>	Year <input type="text"/>
	Month <input type="text"/>	Day <input type="text"/>	Year <input type="text"/>

URL Matching	<input checked="" type="radio"/> Retrieve page that most closely matches search criteria <input type="radio"/> List all pages that match search criteria
Aliases	<input checked="" type="radio"/> Merge aliases (search results for yahoo.com, www.yahoo.com and yahoo.com/index.html will be merged together) <input type="radio"/> Show aliases separately (a search for yahoo.com will list www.yahoo.com separately) <input type="radio"/> Don't show aliases (a search for yahoo.com will not show www.yahoo.com)
Redirects	<input checked="" type="radio"/> Hide redirects (on the search results, we will not display pages that redirect to other pages) <input type="radio"/> Flag redirects (on the search results, we will mark all pages that redirect to another page with an 'r') <input type="radio"/> Show redirects (on the search results, we will display pages that redirect)
File Types	<input type="text" value="All types"/> Will only display files of the type you specify
Duplicates	<input type="checkbox"/> Show duplicates (if we have 20 identical versions of a page on the same day, we will show them all)
Comparison	<input type="checkbox"/> Show checkboxes to allow comparison of 2 versions of a page. Comparison technology provided by Docucomp .
Convert to PDF	<input type="checkbox"/> (BETA) Provide links to a service that will convert a version of a web page to PDF format. Conversion technology provided by 2Convert .

Advanced URL locator hints and tips

There are a number of easy URL-based queries for conducting Advanced Searches on the documents in the Wayback Machine. To conduct these Advanced Searches, simply enter the following URLs in your browser's location or address bar.

Retrieving the most recently archived copy of a specific URL

<http://web.archive.org/http://www.cnet.com>

where "http://www.cnet.com" is the target URL. This query returns the most recently archived version of that target URL in the archive.

Retrieving an archived copy of a specific URL from given date

<http://web.archive.org/20011007203917/http://www.cnet.com>

This returns a specific document whose URL matches the target URL and whose archive date most closely matches the date specified in the format YYYYMMDDhhmmss. In the example above, this returns www.cnet.com archived on October 7, 2001 at 8:39pm and 17 seconds.

The date need not be specified to the second. Using a truncated date will return an archived page that most closely matches the average value of the date specified.

Example of truncating to the Year

<http://web.archive.org/2000/http://www.cnet.com>

This returns the document whose URL exactly matches <http://www.cnet.com> and whose archival date most closely matches July 1, 2000 (July 1 is the middle of the year or the "average value" of the year 2000).

Example of truncating to the Year and Month

<http://web.archive.org/200010/http://www.cnet.com>

This returns the document whose URL exactly matches <http://www.cnet.com> and whose archival date most closely matches October 15, 2000 (the 15th is the middle of October or the "average value" of October, 2000).

Searching for all copies of a specific URL archived in a given time period

http://web.archive.org/200109*/http://www.cnet.com

This returns all copies of a specific target URL (e.g. <http://www.cnet.com>) which were archived beginning with the date specified in the format YYYYMMDDhhmmss. In the example above, this returns a list of all all archived versions of www.cnet.com archived in September 2001.

Searching for all URLs for a site archived in a given time period

http://web.archive.org/200109*/http://www.cnet.com*

This returns all URLs that begin with <http://www.cnet.com> which were archived in September 2001.
